

# NEW Removable SafetyPup Mesh Panel

## Ever had one of these problems?

- Your Existing customer has just gotten a cute puppy, but their ornamental fence has pickets spaced too far apart so the little guy can squeeze right through them.
- A customer is looking to install a new fence to keep their puppy in the yard, but when it gets bigger, they want a more open feeling than a narrow-spaced ornamental or chain link fence offers.
- A customer wants an attractive fence to keep their small dog or puppy in the yard without the added cost of a narrow-spaced fence like the Jerith's 400 series or SafetyPup styles.

## Well, Jerith has the solution - NEW SafetyPup Mesh Panel!

SafetyPup Mesh is a 24" high, welded wire panel that fits into our standard post spacing. It is constructed from sturdy 9 gauge galvanized wires that are powder coated with a black finish after welding. The vertical wires are spaced 1-3/4" apart using horizontal stiffeners to keep a small dog's head from poking through the mesh. Like all of our welded wire products, SafetyPup Mesh comes on a flat panel (not a roll) with an 8 year warranty.

The standard 70-1/2" panel works perfectly with our Residential, Liberty, Regency, or Ovation products, and is much less expensive than our narrow-spaced fence styles. Once the homeowner's dog get big enough that he /she can't squeeze through the pickets on the primary fence, the SafetyPup Mesh panels can simply be removed. They can even be reused in the future for a new puppy!
